

SYNECCO, GALWAY

Synecco is a leading design and contract manufacturing provider for the medical device industry based in Galway, Ireland. Synecco required our services to specify lighting for the redesign of an open place office space, other smaller offices and canteen areas within the building.

The office spaces within the building are now illuminated with our Otto LED fittings. This architectural suspended linear is perfect for office, retail and education applications and is supplied with bi-directional output as standard.

Synecco's stairwells and hallways are now fitted with our Comfort LED and Gamma LED fittings.

The Comfort LED is an economic high-performance IP44 downlight with a deep cut-off angle for glare control and comfort. The Comfort's Osram LED technology and enhanced diffuser design provides outstanding light uniformity.

The Gamma LED is an ultra-slim polycarbonate wall/ceiling light with a matt white finish to its body and diffuser. The Gamma's rear fixing bracket and terminal housing make it an easy fitting to install and its IP54 rating make it suitable for bathroom use.

Synecco has also been fitted with a variety of emergency fittings. Our Encore, Eagle, Raven and IP65 Falcon LED have all been applied within the building. We have a wide variety of emergency lighting products available, designed to meet various building regulations and requirements.
