

TESLA GARAGE - GATWICK

Tesla Garage Gatwick – Tesla Motors designs and manufactures premium vehicles powered purely by electricity generated by an on-board battery.

Our Freska LED downlights and LED Infinite 600 x 600 panels were installed throughout their new showroom and office areas. Ansell lighting was approached by 7 Core Electrical Nottingham to provide a lighting specification and design that met the wishes of the architect and owners of the site. Their key objectives were to achieve maximum illumination performance combined with minimal energy consumption.

We were able to achieve this with Freska LED throughout the showroom area. This economic ultra-slim downlight is ideal for use in areas with a shallow ceiling void; with up to 69lm/W and a 30,000 hours average lifetime, it was the perfect fitting for this application.

Infinite 600 x 600 LED panels were used in the office areas. These high performance LED flat panels with low glare and even light distribution ensures suitability for most office applications, with up to 56% energy efficiency which was a perfect match for Tesla's own energy efficient brand values.
